

Soludox[®] 50%

Pigs and Chickens

*Soluble and Stable
in drinking water*

Efficient dosing

Short withdrawal

SoluStab technology

eurolvet

Animal Health

Soludox 500 mg/g powder for use in drinking water for chickens

Soluble and Stable in solution

At a concentration of 200mg/L the solution is stable for at least 24 hours.

No lactose

Less risk of clogged drinking nozzles caused by biofilms growing on lactose.

Short withdrawal

Only 3 days for meat after a dose of 10mg/kg for 4 days.

Low dosage of 10 mg/kg BW

P. multocida: 10 mg doxycycline hyclate / kg body weight /day, corresponding to 20 mg Soludox per kg body weight, for 3-4 consecutive days.

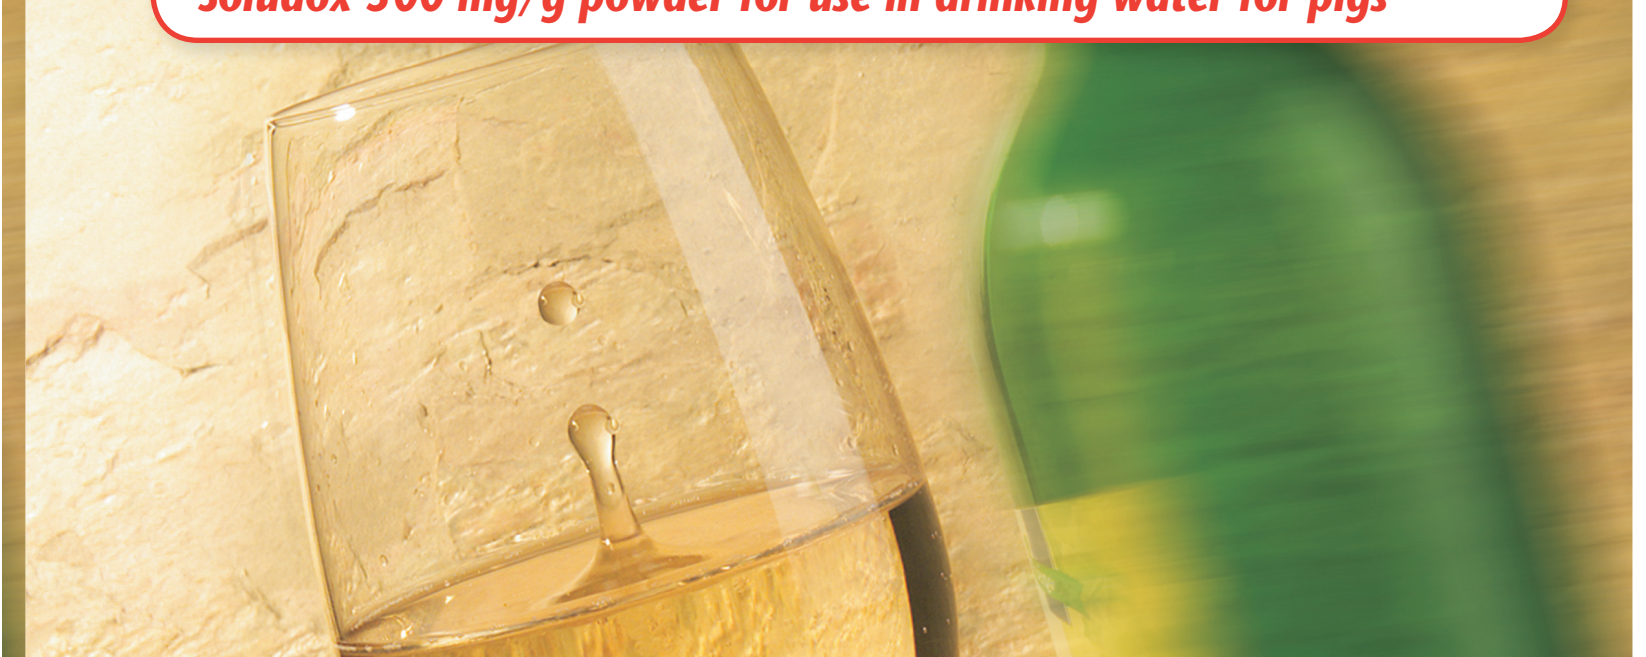

***Pasteurelloses* on label**

Chickens (broiler, pullet, breeder): Where clinical disease is present in the flock, treatment and prevention of Pasteurellosis caused by *Pasteurella multocida* or respiratory infections caused by *Ornithobacterium rhinotracheale* (ORT).

Soludox 500 mg/g powder for use in drinking water for pigs

Soluble and Stable in solution

At a concentration of 200mg/L the solution is stable for at least 24 hours.

No lactose

Less risk of clogged drinking nozzles caused by biofilms growing on lactose.

Also *Actinobacillus pleuropneumoniae* on label

For the treatment of the clinical signs associated with porcine respiratory disease caused by *Actinobacillus pleuropneumoniae*, *Pasteurella multocida*, and *Mycoplasma hyopneumoniae* susceptible to doxycycline.

Efficient dosage

12,5 mg/kg BW, lower dosage results in less antibiotic usage.

Flexible duration of treatment

4-8 days treatment leaves the choice up to you to determine the actual need to treat longer or shorter. This promotes prudent use of antibiotics.
