

ProMyr[®] NT 520

Description

- ProMyr[®] NT 520 is a mixture of formic acid, propionic acid and salts of organic acids.
- The salt of organic acids has a very favourable influence on the products corrosive effect on machines which is strongly reduced compared to pure organic acids or blends of acids.
- ProMyr[®] NT 520 is very efficient with respect to the pH-decreasing ability in silage, but also when considering the protection of yeast and fungi.
- More information is available on www.promyr.com.

Delivery forms

- Polyethylene drums 30 l
- Polyethylene drums 200 l
- Container (IBC) 1000 l
- Bulk

Applications

- ProMyr[®] NT 520 is a silage additive.
- ProMyr[®] NT 520 is effective when ensiling grass, clover and lucerne at a dry matter below 35 %.
- ProMyr[®] NT 520 prevents efficiently growth of unwanted bacteria in silage such as butyric acid bacteria but also protects against yeast and fungi.

Dosage

- Grass 3-4 litre/ton green fodder
- Grass-clover (< 25 % clover) 4-5 litre/ton green fodder
- Grass-clover (> 25 % clover) 5-6 litre/ton green fodder
- Clover, lucerne 6 liter/ton green fodder
